Use Tricks Leo3 Smart Pro

1. 4K Video Resolution and RAW format for photos (for phones that support these formats), must be enabled in the settings menu (Gear Icon), first page in the bottom part: "Use the Camera2 API", this item must be enabled .
2. The RAW format (for phones that support it) for photos can be selected in the settings menu (Gear Icon), Photo Settings and then RAW. You can choose between "JPEG only format" - "JPEG and RAW" - "RAW only".
3. If your phone supports an SD external memory, you can choose the SD card as save location. To do this go to the Settings menu (Gear icon), select "More camera controls" and search for "Use Storage Access Framework". A screen will open where you can choose the SD card as the default memory.
4. It is possible to view the Photos and Videos made in dive directly from the housing, by selecting the image at the top right of the app's main screen. The first time you will be asked your preferred gallery system for viewing. Our advice is to use Google Photos, because it is an Application that is supported by all Android Phones, so we are sure of compatibility with all phones.
5. In the Google Photos Gallery, to play a Video you must press first the TAB Button and then the OK Button. With Left and Right arrows it is possible to scroll between one photo / video and another. Keep press the TAB Button for 5 seconds to return to camera control.
6. The Smartphone screen can be put in Standby by pressing the On / Off Button for 5 seconds. This allows the housing battery to charge the smartphone faster, and to limit overheating. Our advice is to turn off the screen during the dive every time the housing is not used. Just press any back button or keep pressed the On / Off button for 5 seconds to re-activate the App.
7. To avoid accidental activation during surface movements, it is advisable to exit the App before setting the screen to Standby. Press and hold the "Arrow up" button for 5 seconds to return to the smartphone home screen. Now you can turn off the screen by pressing the on / off button. To re-activate the smartphone, hold down the Ok button for 5 seconds. This procedure must be performed every time you want to unlock the smartphone.

Some tips for using the Leo3 Smart

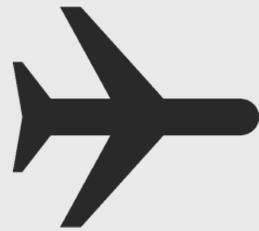

1. The opening and closing of the housing must always be done in a vertical position. This avoids the possible entry into the housing of those drops of water that may be found in the O-ring seats. Wipe dry with a cloth both the O-rings and their seats before closing the housing.
2. Check for proper connection of both the power cables (either that of the housing than the phone's). The housing is properly powered when the red LED flashes, while the smartphone is powered when the screen shows the charging icon. If you do not connect the power cord to the smartphone, the battery pack it will not power the smartphone and therefore it will not be able to maintain the battery charge.
3. Check that all power cables, housing's and smartphone's, are placed in the housing's proper seats and do not compromise the correct closure of the housing.
4. Check the correct Bluetooth connection between the housing and the smartphone. Select your case from the Bluetooth Setting's list and press "connect." If the connection has been successful, the green LED will start flashing.
5. Use the energy-saving mode by keep press for 5 sec. the "On / Off" switch whenever you do not have the need to use your smartphone. This prevents the telephone from overheating excessively, in addition to allowing greater power autonomy.

How to set up your smartphone for optimal use of your Leo3 Smart

1. Updated phone backup

2. Flight mode active

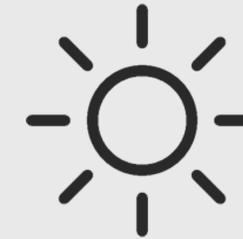

3. Bluetooth active

4. PIN Code Disabled

5. Battery fully charged

6. High display brightness

7. Active Ringtone

1. Make sure you have made a recent backup of your phone data, before using it with Leo3 Smart. This allows you to recover your data in the event of malfunctions of your phone. For Android smartphones, you must set up the backup from your Google account, or use one of the dedicated programs, downloadable from the net.
2. Active flight mode minimizes the power consumption of the smartphone, turning off the GSM / 4g network, allowing a longer battery pack autonomy.
3. Activate the Bluetooth connection. By setting Airplane mode, all connectivity modes are disabled. Just reactivate the Bluetooth so to use it also in flight mode.
4. Disable any kind of security lock (PIN, password, sign or biometric data), and set in Swipe.
5. The smartphone battery charge must be as close as possible to 100%. In this way the PowerBank will keep charged the Smartphone for about 4-5 hours.
6. The smartphone screen brightness should be set at maximum power, especially if you use the housing in shallow water or in bright and transparent seas. Turn off the automatic display brightness.
7. It's necessary to insert the smartphone in the housing with the active ringtone. If you use the smartphone in silent mode, the acoustic alarm that signals flooding of the housing can not be heard.
